

AMLaP23

[AMLaP23](#) took place from August 31st to September 2, with many current and former Banana Slugs in attendance. It was hosted by the [Basque Center for Brain and Language](#) in San Sebastián-Donostia, whose mountain-hemmed, fog-suffused shores were eerily reminiscent of home. There were six presentations from current students and faculty:

- Max Kaplan and Amanda Rysling, "Is phonotactic repair of onset clusters modulated by listener expectations?"
- Jack Duff, Pranav Anand and Rysling, "No cost for canceling causal inferences in the comprehension of short English narratives"
- Vishal Arvindam, Maxime Tulling and Ailís Cournane, "Representing non-actuality in the online processing of negative and possibility utterances"
- Matthew Kogan and Matthew Wagers, "Maintaining Syntactic Positions and Thematic Roles in Memory: Evidence from Ditransitive Alternations in English"
- Lalitha Balachandran, Stephanie Rich and Wagers, "Domain-sensitivity of sentence memory and (lack of) temporal contiguity effects"
- Arvindam and Wagers, "The time course of processing anti-local anaphors in Telugu supports the Local Search Hypothesis"

We also ran into many former slugs, like [Kelsey Sasaki](#) (Oxford; presenting joint work with Matt Husband, Daniel Altshuler and Runyi Yao) and [Jakub Dotlačil](#) (Utrecht). And [Professor Liv Hoversten](#) from Psychology, who completed a postdoc at BCBL, was also present.
